css-toolset.css

This is a **small set of tools** that aims to generate a starter framework from which you can start **generating mobile sites with more modern styles**.

To do this, several styles are overwritten by default browsers.

Status: In development (not for production)

Tools and Utilities

- .flat - Remove the rounded edges.
- .bol - Element with color background I define in the variable --hover.
- .com - Swap colors for their complementary.
- .out - Remove the border from the elements
- .inv - Inverts the colors defined in the variables --text and --hover.
